Show Details

Hello Ms. Kathryn:

I noticed that in Section VI of the TexComs application, the operator proposes to recomplete this well in the interval between 5,134 feet and 6,390 feet, but I have not been able to find a complete description of how

exactly it intends to distribute the perforations between these two depths. Based on the available composite log, I would guess that over a dozen perforation intervals may be proposed. If you have information the proposed intervals, I would appreciate it if you could share them with us. Thank you in advance for your cooperation with this matter.
Sincerely,

Jose Eduardo Torres - 6WQ-SG
